

AR TRAINING PROGRAM

SYLLABUS OVERVIEW

1-Month AR Syllabus

Unity + AR Foundation (ARCore / ARKit)

Duration: 4 weeks (1 month)

Schedule: 2 hours/day

Outcome: Build a basic AR mobile app

Agenda

01 Program Overview

02 Tools & Setup

03 Week 1 — AR Fundamentals

04 Week 2 — Unity Basics

05 Week 3 — AR Development

06 Week 4 — AR Mini Project

07 Assessments & Final Evaluation

Program Overview

In 4 weeks, you'll progress from AR concepts → Unity workflows → core AR features → a deployable mini project.

Learning Outcomes:

- Explain AR vs VR vs MR and common AR use cases
- Navigate Unity scenes, GameObjects, components, and basic C# scripts
- Implement plane detection, object placement, and camera integration
- Integrate simple UI, test on mobile, and demonstrate an AR app

Concepts

Unity Basics

AR Features

Tools & Tech

Core Tools

- 🎮 Unity (via Unity Hub)
- 📱 AR Foundation
- 📱 Target platforms: ARCore (Android) / ARKit (iOS)

What each tool does

- **Unity:** scenes, assets, scripting, builds
- **AR Foundation:** cross-platform AR feature layer
- **ARCore/ARKit:** device tracking & sensors

Device Sensors

Foundation: Overview

Week 1: Introduction to AR

Core Concepts

- **AR vs VR vs MR** (definitions + quick comparison)
- **Typical AR applications** (education, retail, navigation, training)

Type	What you see	Where content lives	Device examples
AR (Augmented Reality)	Real world + digital overlays	Screen / Camera view	Smartphones, Tablets
VR (Virtual Reality)	Fully virtual environment	Closed headset	VR Headsets (e.g., Quest)
MR (Mixed Reality)	Real + Virtual interacting	Spatial environment	HoloLens, Magic Leap

Setup Milestone

Install Unity and required packages (AR Foundation + platform support)

Friday Assessment (Weekly)

Short concept check + environment setup verification

Week 2: Unity Basics

Unity Fundamentals

- Scenes & GameObjects
- Components and Inspector workflow
- C# scripting basics (scripts as components)

Practical Outcome

Build a simple interactive scene (place and move a basic object)

Friday Assessment (Weekly)

Demonstrate understanding of scene structure + basic script behavior

Unity Editor Interface Overview

Week 3: AR Development

Feature Focus

Plane Detection (find surfaces)

Object Placement (tap-to-place)

Camera Integration (AR camera behavior)

Practical Outcome

Place a 3D object on a detected plane and keep it stable as you move

Friday Assessment (Weekly)

Demo: plane detection + object placement working on-device

Visualizing AR Foundation Plane Detection

Week 4: AR Mini Project

Build & Polish

- UI integration (simple prompts/buttons)
- Mobile testing workflow
- Final mini project packaging

Deliverable

A basic AR mobile app that demonstrates a complete user flow

Friday Activity

Project milestone review and bug-fix pass

Assessments & Final Evaluation

Weekly Assessments (Every Friday):

- Checkpoint on week objectives (concepts + practical verification)

Final Evaluation:

- AR app demonstration
- Brief walkthrough: problem → features implemented → demo

Practical verification is the core of our evaluation process.

Thank You
