

#SQL Training

1-Month Program (4 Weeks) | MySQL / PostgreSQL

DURATION

1 month (4 weeks)

SCHEDULE

2 hours per day

ASSESSMENTS

Weekly (every Friday) + Final Practical Test

Catalog

- 01** Program Overview & Outcomes
- 02** Weekly Structure & Assessments
- 03** Week 1: SQL + Databases Fundamentals
- 04** Week 2: Core Queries

- 05** Week 3: Aggregations & Joins
- 06** Week 4: Advanced SQL
- 07** Final Evaluation & Next Steps

Program Overview & Outcomes

Build a solid SQL foundation to create tables, query data, and solve multi-table problems

Learning Outcomes

-  Understand databases & RDBMS concepts
-  Create databases & tables; choose appropriate data types
-  Write queries to filter, sort, and limit results
-  Use aggregations and joins to analyze data
-  Apply advanced SQL features (subqueries, views, indexes, constraints)

Tools & Tech

 **MySQL**

 **PostgreSQL**

Weekly Structure & Assessment Plan

🕒 2 hours/day learning + practice lab

📅 Friday: weekly assessment

01 **Week 1 Focus**
Fundamentals + table setup basics

02 **Week 2 Focus**
Query writing accuracy & readability

03 **Week 3 Focus**
Aggregations + joins (multi-table thinking)

04 **Week 4 Focus**
Advanced SQL features & performance basics

Week 1 — SQL & Databases Fundamentals

Key Topics

- ✓ Database concepts & RDBMS basics
- ✓ Creating databases and tables
- ✓ Core data types (e.g., numeric, text, date/time)

Practice Outcomes

- Create a database and 2–3 tables
- Define columns with correct data types

Week 2 — SQL Queries

> Key Topics

SELECT

WHERE

ORDER BY

DISTINCT

LIMIT

Logical operators: **AND, OR, NOT**

🖥️ Practice Outcomes

- ✓ Write correct filters and sorting rules
- ✓ Produce clean result sets with DISTINCT and LIMIT

Week 3 — Aggregations & Joins

Join Relationships

Aggregation Flow

Key Topics

- ✓ Aggregations: **COUNT, SUM, AVG**
- ✓ **GROUP BY, HAVING**
- ✓ Joins: **INNER JOIN, LEFT JOIN, RIGHT JOIN**

Practice Outcomes

- Summarize data by groups
- Combine data across tables to answer questions

Week 4 — Advanced SQL

Subqueries

- ✓ Use subqueries to solve complex filters

Views & indexes

- ✓ Create views to simplify repeated queries

Constraints

- ✓ Apply constraints to improve data quality

Final Evaluation & Next Steps

Learning Path

Final Evaluation

- ✓ **SQL Practical Test** (end of Week 4)
- ✓ **Covers:** table creation, core queries, aggregations, joins, and advanced features

What to do after completion

- Keep a personal query cookbook (patterns for joins, grouping, subqueries)
- Practice with real datasets using MySQL/PostgreSQL
- Review weekly assessments to identify gaps

Thank You
